

## GVCS PA Vaccination: 2nd Shot

May 5, 2021

By Hayoung Sally Lee

After a year of struggles through the pandemic, the vaccine for the Coronavirus has finally been developed. Global Vision Christian School, which is an international school located in Pennsylvania, has decided to vaccinate all the students who were applicable to give the students better freedom and to guarantee their health. They were vaccinated with Pfizer, which was known to have the least side effects and the safest. On April 8th, all students over 16 went to the closest hospital to get their first vaccination. Then 3 weeks after, on April 29th, they went there again to get the second vaccination. Some of the students struggled with minor side effects of fever, dizziness, tiredness,

and muscle pain. Those who were experiencing pain were sent back to the dormitory building to take ample rest for recovery. After a few weeks, the students would be able to go out and shop in markets as they did a year ago. The students are very excited and looking forward to that day. The fast development of the vaccination is improving people's lives to go back to normal daily lives. I hope this pandemic will end safely and peacefully.
